

# Managed Hosting

---

Our managed Windows servers are designed for businesses that demand uncompromised performance from their hosted solutions.

If your business has mission critical applications (such as databases, e-commerce Web sites, and e-mail) then downtime simply isn't an option. With our managed Windows servers you are allocated your very own, custom-built hardware platform which is set up, configured and maintained by our team of accredited hosting engineers.

Our managed servers benefit from industry leading hardware and are hosted in our purpose built data centre to provide the highest level of continued performance available. This is to provide the ideal platform for your business critical Web sites and applications. We offer a range of hosting platforms to meet your diverse business requirements.

## Standard - Web Platform

If your business is dependent on the availability of your Web site, our Standard model is the ideal platform for you.

Our Standard server enables you to host your Web site(s) on your own dedicated server platform; free from the constraints and service issues often associated with a shared platform.

Prices from £399 per month, 12 month minimum contract.

## Professional - Database Platform

If your business requires a powerful database or e-mail server that promises reliability, availability and performance, our Professional model provides the ideal platform. With a fully customisable configuration we can design the solution around

your specific requirements and upgrade it over time to meet your evolving business needs.

Prices from £499 per month, 12 month minimum contract.

## Enterprise - Virtualisation Platform

With our Enterprise server you can save money and improve performance by consolidating separate hardware platforms and associated management and hosting costs into one single powerful solution.

This highly specified server platform can be partitioned into four powerful and independent virtual servers. This offers you the advantage of being able to implement more ambitious hosting solutions – such as load-balancing and clustering – without the associated costs of separate hardware and hosting investments.

Prices from £599 per month, 12 month minimum contract.

---

We use industry leading components including Intel® Xeon® processors and the latest SAS hard drives.

We use high performance enterprise-grade Dell PowerEdge™ R410 & R710 Servers in every solution.

All our hosting technical team are MCSE, MCSA and MCT qualified engineers.

24/7

As a managed hosting customer you will have direct access to our certified engineers 24/7.

Key Features

- 24/7 support and assistance
- Service Level Agreement (SLA)
- Daily off-site backup and recovery
- Easy to use Server access panel (HELM)
- Secure hosting environment
- High performance Dell™ hardware platform
- Standby hardware for immediate service recovery
- Service monitoring and alerts
- OS and application installation and patching
- Web traffic statistics
- Managed (shared) FortiGate firewall security
- Microsoft® certified support engineers
- Flexible and configurable server upgrade options
- Custom application installation and management

Fully Upgradable Solutions

The managed server platforms (below) are fully customisable and you can choose from a wide range of upgrade options to create a truly bespoke hosting solution. These upgrades include:

- Increase hard drive capacity with extra drives
- Choose from a range of Windows Operating Systems
- Add custom or 'off-the-shelf' applications
- Add memory modules to improve performance
- Increase bandwidth allowance
- Upgrade data backup capacity
