

Web Hosting and Domains

Continued growth in Internet usage and confidence in e-commerce means that now more than ever businesses need an effective Web site to communicate with their customers. However, for many businesses creating and managing a Web site is not always easy and often takes up precious time that is needed for other core business tasks.

At Zen Internet we have developed a range of Web hosting solutions that are ideal for any size of business. Whether you need to create or develop a new Web site or simply need someone to host your existing Web site, we can offer something to fit your requirements.

Our scalable first class network infrastructure means that our hosting services can support growing Web sites with high bandwidth requirements. We use enterprise class Dell hardware to provide a high performance and robust platform which is monitored 24/7 by a team of engineers certified in both Windows and Linux systems administration.

“Confidence in e-commerce is high, and the country will account for at least 40% of 2008 online sales in Western Europe.”

Web Hosting

Our Web hosting packages are ideal if you want to host an existing Web site for your business or you want to create a Web presence from scratch. We offer both Windows and Linux Web hosting, all fully supported with our exceptional UK based service and technical support.

Windows Web Hosting

Our Web Hosting packages are ideal for Web designers and developers, offering Web space of up to 5GB and monthly bandwidth of up to 15GB. Our packages offer MS Access and SQL 2005 database space and up to two supported Web sites.

The Control Panel offers you the ability to perform basic administration tasks and the Livestats tool analyses traffic to your Web site. Our resilient and reliable hosting infrastructure comes with 24/7 monitoring and management, firewall protection and daily backups.

Cutting Edge Windows Hosting Development Tools

- **ASP.NET 2**
A powerful tool for creating dynamic and interactive sites
- **NET (v1, 2, 3 & 3.5)**
A programming environment from Microsoft that enables developers to build fast, portable applications for Web sites
- **AJAX**
A new and popular set of development tools, helping to make interactive pages that load more quickly and efficiently
- **MS SQL 2005**
The ideal solution for developers creating database driven sites

Linux Web Hosting

Offering Web space of up to 10GB and bandwidth of up to 50GB, our wide range of Linux packages are ideal for smaller businesses whatever their Web hosting requirement.

All packages include a Control Panel to carry out basic administration tasks, access to Fantastico Web tools and firewall protection as standard. In addition we will monitor and manage your Web site hosting 24/7 and regularly backup your data.

E-mail features with Linux Hosting

- E-mail forwarders / E-mail aliases**
 Receive mail for more than one e-mail address to a single POP3 mailbox. Each account has an unlimited number of e-mail aliases
- Autoresponders**
 For each separate e-mail account, auto-responders can be set up to send a reply when a message is received
- Webmail**
 Gives a simple and extensive mail interface and also provides calendar, memos and task management
- E-mail Anti-virus & Anti-spam**
 Guards against viruses by checking your e-mail for dangerous content before it arrives at your desktop

“It’s difficult to quantify the worth of a Web site, but we’ve learned, in working with Zen, that having a site that’s built properly and linked properly can raise our profile enormously. And the boost to our reputation and image has been priceless.”

Domain Names

Domain names are a must for anyone who is serious about having an online presence. With a domain you become totally unique on the Web and appear more professional to your customers, clients and suppliers. A good domain name will improve your credibility online.

We provide domain registration, transfer and parking options. All of our services come with Anti-virus protection, spam filtering for forwarded e-mail and the ability to make changes to DNS records all completely free of charge.

Domains available from us include .co.uk, .com, .eu, .net, .biz, .info, .org, .org.uk, .ltd.uk, .plc.uk, .net.uk and .me.uk.

SSL Certificates

Our SSL Certificates ensure online security for e-commerce Web sites. SSL Certificates are required if you communicate with your customers via your Web site. For example, receiving a customer order, taking a customer credit card payment or processing any kind of confidential information.

SMTP Delivery & Backup

Our ‘SMTP Delivery with Backup’ service offers an easy to use method for providing full SMTP delivery to a mail server of your choice. Available for any number of domains, the service provides a convenient approach for accessing e-mail should your mail server experience problems and be unavailable for any period of time.
