

# Leased Lines and Ethernet Product Options

The Leased Lines and Ethernet product set now offers a range of options to tailor your solution to your exact requirements.

We provide you with a fully managed solution including hardware complete with a 24/7 4 hour onsite response support contract. We invest heavily in our network to eliminate single points of failure however incidents on carrier networks are beyond our control.

Therefore we strongly recommend that you consider one of our resiliency options to minimise any effect as a result of an incident or even force majeure. You can add an automatic failover through xDSL Backup and/or various levels of resilience for added peace of mind. All products are subject to availability.

## xDSL Backup

xDSL Backup solutions provide you with options for load balancing bandwidth, or as a failover for existing connectivity at speeds of 64Kbps to 2Mbps. In the occurrence of a fault, your connection will automatically switch over to the xDSL circuit and continue to provide connectivity for your business. xDSL Backup solutions allow organisations with lower bandwidth-intensive operations to retain Internet connectivity for basic browsing and e-mail.

### Features:

- ADSL/SDSL option
- Automatic failover
- Managed service only
- For usage up to 2Mbps

Prices from £20 per month, 12 month minimum contract.

## Access Backup

Access Backup solutions provide you with options for load balancing bandwidth or as a failover for existing connectivity at speeds of 64Kbps to 2Mbps. Access Backup solutions are more suited to organisations with higher bandwidth-intensive operations requiring robust backup connectivity.

### Features:

- Automatic failover
- Load balancing option
- Managed service only
- For peak usage up to 2Mbps

Prices from £60 per month, 12 month minimum contract.

## Ethernet Backup

Ethernet Backup solutions are the next generation in business class connectivity at higher speeds of 2Mbps to 1Gbps. We recommend Ethernet Backup as scalable resilience for high end solutions with the flexibility to upgrade bandwidth at any time to suit your peak usage requirements.

### Features:

- Automatic failover
- Load balancing option
- Managed service only
- Flexible upgrades

Prices from £480 per month, 12 month minimum contract.

The Ethernet performance-wise is more than Multibuild expected; it is more than capable of running our entire infrastructure and delivering services to our remote connections.

Sean Lanceley,  
Multibuild
