

MSSP Core Network Security

Deployed at the core of large enterprises or service providers to block viruses attached to email, web and FTP traffic from entering or leaving the network. Utilizing policy-based routing or content-switching can deliver scalable, multi-gigabit performance by redirecting specific traffic to a FortiGate security appliance for advanced scanning. This deployment configuration also eliminates many of the inline deployment concerns.

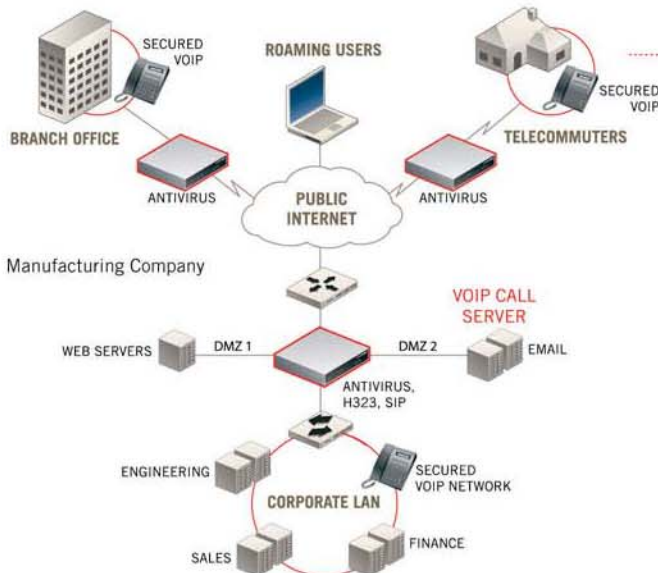

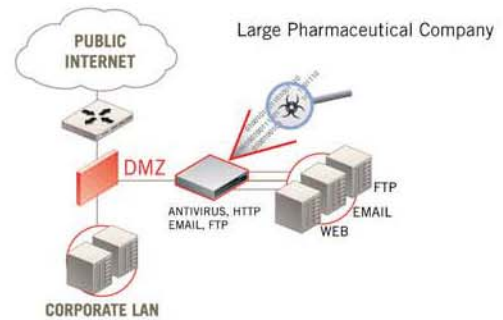

Outbreak Containment

Deployed as part of a layered security design, FortiGate best-of-breed security systems provide application-layer protection against content-based threats that may bypass the gateway firewall.

DMZ Protection

Deployed to protect public facing Web, FTP and Email servers deployed on DMZ segments of your existing firewall. Fortinet's Advanced Antivirus technology detects and blocks virus infections at a fraction of the cost of traditional server software without impacting server performance by offloading virus scanning overhead.

Edge Protection

Deployed as the network security gateway, a single FortiGate security system can secure multiple DMZ's along with the corporate network from viruses and other content-based attacks. Fortinet's security zone and virtual domain features offer a lower total cost of ownership to enterprises needing to secure multiple networks.

FortiGuard Distribution Network

Fortinet provides complete Wildlist virus protection for over 4500 active viruses from a database of over 60,000 which affect today's networks. Fortinet also delivers real-time signature updates from over 50 redundant high speed database servers around the globe. To meet the needs of a growing global economy and the ever changing security landscape, Fortinet is committed to providing a worldwide and first class service delivery network.

Global Virus Research Team

Fortinet's Antivirus security services are created, updated and managed by a global team of Fortinet security professionals working around-the-clock, seven days-a-week to ensure that the latest attacks are detected and blocked before they can harm your corporate resources or infect your end-user computing devices. Fortinet provides the fastest AV signature response times in the industry.

FortiGuard Mobile Services Network

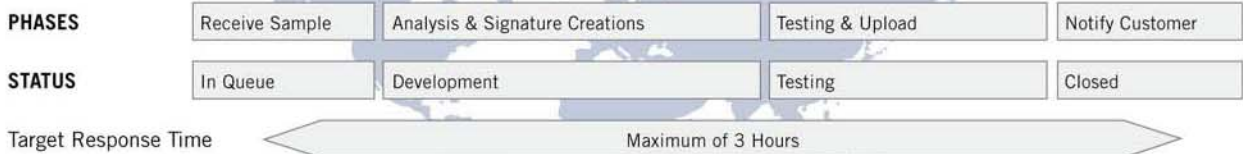

FortiGuard is configurable in a hierarchical architecture where signature updates are cached in real-time from the Fortinet global database to a locally hosted service provider database. This hierarchical architecture enables services provider to flexibly customize thier protection configuration while maximizing performance, ensuring security, and sustaining service levels.

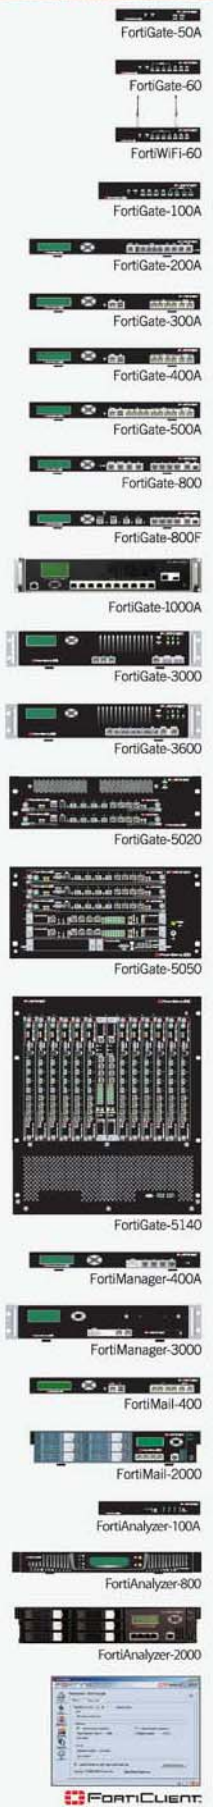

- Automated Updates** – Keeps defenses up-to-date with the latest viruses, spyware, & heuristic engines
- Industry Leading Threat Response Time** – Fortinet beats the competition, offering signature updates to block the latest attacks
- Proactive Threat Library** – Protection from Wildlist threats and thousands of popular OS and application vulnerabilities
- 24x7 Worldwide Coverage** – Over 50 FortiGuard distribution servers are deployed in high speed data centers to provide global IPS updates
- Per Device Subscription Services** – Significantly lowers subscription costs versus traditional per user licensing models

FortiGuard Premier Service

- Antivirus signature development delivered by Fortinet's global staff of over 100 antivirus engineers
- Industry leading 24x7, 3 hour guaranteed SLA to provide virus signatures for submitted virus samples
- Proactive alert notifications for any possible virus outbreaks
- Expert consultation from Fortinet's antivirus research team
- Monthly virus activity reports delivered to customers
- Online virus dictionary

FORTINET

REAL TIME NETWORK PROTECTION

CUSTOMER SATISFACTION

"Securing our customers' VoIP conference calls is a top priority for Polycom and we are excited that our work with Fortinet has enabled secure, real-time UCC calls for our customers."

- Ed Elliot, Sr. Vice President & General Manager
Polycom Video Systems Division
