

Managed Server Virtualisation

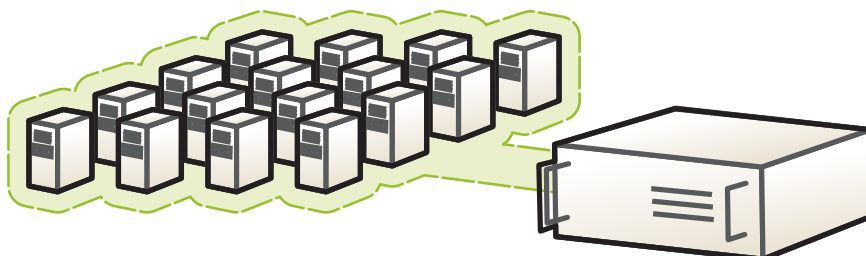

Server Virtualisation technology allows multiple physical servers to be replaced by a single server platform, providing significant cost and efficiency benefits whilst offering options for resiliency and enhanced reliability. Virtualised server environments are more flexible and easier to scale than traditional physical servers, allowing organisations to be agile and responsive to changing business needs.

With so many benefits it's easy to see why Server Virtualisation is gaining in popularity. However, implementing Server Virtualisation is not always a straightforward proposition and the cost savings associated with the consolidation of server hardware can be reduced by the required investment in SAN infrastructure, technical accreditation and on-going support and maintenance.

At Zen Internet we provide fully Managed Hosting solutions, incorporating market leading virtualisation technologies, which enable your business to consolidate its server estate and enjoy all the benefits virtualisation has to offer without the time and cost involved in implementing it in-house. Built around your specific needs and using technology from VMware and Microsoft, we will provide the following managed service:

- Detailed consultation to capture your specific technical requirements
- Design, configuration and management of your hosting environment
- Flexible mix of both physical and virtual servers
- Configuration and management of all virtual servers
- Integrated high capacity SAN providing performance and bulk storage options
- Resilient platform with built-in high availability
- High availability to protect against hardware failure
- Optional fault tolerance for the highest uptime requirements
- 24/7 direct engineer support

As an established and experienced hosting provider we can advise you on the best approach for your business, and help you realise the benefits that Server Virtualisation has to offer.

Quick features

Benefits of Server Virtualisation

- Reduce hardware costs
- Fault tolerance
- High availability
- On-demand resources
- Quickly scalable
- Remove the one-server one-role inefficiencies

Why choose Zen Internet?

- 24/7 UK support
- Microsoft and VMware accredited engineers
- Virtualisation expertise
- Network and data centre operator
- Fully managed service

By moving to a virtualised environment, we reduced our server infrastructure by over 80% and stopped the trend of server sprawl in its tracks.

David Hocking,
Senior Network Engineer,
Zen Internet

That's Zen thinking

Product Guide

Our Hosting Portfolio also includes:

Colocation

If you own and want to maintain your own network and server equipment, but haven't got a secure, temperature-controlled environment in which to store it, then our Colocation packages are the ideal solution. Your equipment is hosted in a secure, purpose-built data centre environment, and is covered by an extensive service level agreement.

"Overall I am incredibly pleased with the move to Zen and I feel that as we centralise our environment into Colocation within Zen the benefits of working with Zen will continue."

Stuart Morgan, IT Director, Explore Learning

Dedicated Servers

We'll provide you with enterprise class server hardware, hosted in a purpose-built data centre and provide you with full remote access.

"Zen's Dedicated Server solution is exactly what we were looking for in order to offer a hosted email service for our customers. Since the Dedicated Server was installed, I no longer have the hassles associated with hosting the server on my premises, and customers have noticed an increase in the speed of their email system. However, the biggest benefit for us comes from the peace of mind we get from Zen's reputation for reliability."

Andy Collins, Vostech

Managed Hosting

Managed Hosting is designed for businesses that recognise the need to provide a reliable performance-centric infrastructure for their business critical hosted services; but lack the desire, time or resources to put such a solution in place.

"Zen recommended and delivered a hosting solution that met our technical and commercial requirements for now and the immediate future. Their support team have also proved to be a valuable resource in helping us migrate to the new platform."

Nobin Rashid, Hallmark Cards Plc
