

Business Talk SIP

SIP Trunking enables inbound and outbound voice communication between a telephone system (PBX) and the telephone network to share your internet or data connections.

Business Talk SIP has been designed for businesses that are looking for increased flexibility and cost reduction from their phone service. Business Talk SIP can be used as a full or partial replacement to traditional analogue or digital ISDN telephone lines. Providing a more flexible and cost effective alternative, and also enabling the end user to take the first step towards Convergence.

As an alternative to traditional telephone connections, Zen Business Talk SIP provides a fully featured, cost effective and proven choice for voice communication with excellent speech quality.

There are additional benefits of Zen Business Talk SIP for disaster recovery and business continuity planning applications. In the event that your business is forced to close an office, your calls can be routed to another office or answering location allowing business to continue.

Key benefits

Number Flexibility

- Business Talk SIP allows you to use numbers from any area in the UK, giving your business a local presence.

Extensive Costs Savings

- More affordable connection, rental and call charges compared to traditional ISDN services. Multi Site customers can also benefit from free site to site calls.

Business Continuity

- No more disruption from bad weather or flooding, alternative routing can be implemented in emergency situations.

Highly Scalable

- As your business grows, additional call capacity can be added quickly, and in much less time than traditional ISDN services.

Number Portability

- If you are looking to move to SIP from ISDN, then you can bring your numbers with you.

Convergence

- Data and voice traffic can be sent over a single connection.

Our mission is to provide the best ISP service in the UK.

Richard Tang,
Managing Director

That's Zen thinking
